## Illinois Solar For All Program Provides Incentive to Go Solar and Lower Energy Costs

### ☀️ What is the Program?

Illinois Solar for All (ILSFA) program increases accessibility to solar energy for low-income households, non-profit organizations, and public facilities by providing incentives to help make solar more affordable. Within ILSFA, the Non-Profit and Public Facilities sub-program (ILSFA-NP/PF) provides solar incentives on properties occupied by non-profits and public facilities which are located in Low-income and/or Environmental Justice communities. The property will receive the benefits of solar energy, though not the energy itself.

As an Approved Vendor Designee in the Illinois Solar for All program, StraightUp Solar can assist you in accessing this program to fund your solar photovoltaic (PV) system.

### ★ Your Organization May be a Candidate!

Our initial analysis indicates that installing a solar PV system can reduce your energy bill and bring environmental benefits to your community. Your organization appears to meet the ILSFA-NP/PF criteria based on your location. We can assist you in bringing solar energy to your property through power purchase agreements, leases, or outright purchase. **Under ILSFA all these options must provide solar energy savings of at least 50% of your current electricity rate with no or low upfront costs.**
